WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Blank 110 x 70 mm from 2 mm sheet. Mark two fold lines 17 mm in from the long edges and fold both flanges up 90 degrees in a bending brake.

Folded: web 40 mm across outside; flanges 18 mm tall from the underside of the web (file the tops level if they come out taller).

Web: four 4.5 mm holes, 25 mm each side of the middle along the bracket and 10 mm each side of the centre line across it.

Band slots after folding: one through each flange, 14 x 3 mm, centred 45 mm each side of the middle, just above the web: drill 3 mm at each end through the bend and file between. Deburr every edge.

Rubber strips: 110 x 5 mm, 1.5 mm EPDM, glued along each flange top, overhanging the flange 2 mm inside and 1 mm outside.

Check: the arm rests on both strips, not on the metal.
